1. Abstract

ZARU is the native token of the ZARUverse—fueling staking, lore drops, access layers, and DAO governance. It's designed for high community participation, credible incentives, and seamless integrations across products.

ZARU runs on BNB Smart Chain (BEP-20) for low fees and fast settlement. This document outlines the protocol vision, token mechanics, utilities, distribution, security posture, and roadmap.

2. Overview

Token name:

ZARU

Ticker:

ZARU

Network:

BNB Smart Chain (BEP-20)

Contract:

TBA

Decimals:

18

Total supply:

TBA

ZARU sits at the core of the ecosystem: it powers staking emissions, governs key parameters, and unlocks lore-driven content and mints. It pairs with MAK1 (infrastructure) and DMD (prestige) in a tri-token design.

Design principle: participation, portability, and purpose.

3. Architecture

ZARU is a BEP-20 token with ERC-20 compatibility. The core contract will be verified, with conservative privileges and transparent configuration. Integrations include staking modules, NFT minting gates, and governance front-ends.

- **Contract standard:** BEP-20 (ERC-20 compatible)
 - **Wallet support:** MetaMask, Trust Wallet, Ledger
 - **Explorer:** BscScan (to be linked after deployment)
 - **Front-ends:** Token page, swap links, staking and proposals dashboards
-

4. Tokenomics

The ZARU supply is fixed at genesis and designed to reward participation while maintaining long-term sustainability.

Bucket	Allocation	Vesting	Notes
Staking & Participation	35%	Linear 24 months	Staking emissions, quests, referrals
Treasury (Ecosystem)	20%	Linear 36 months	Development, partnerships, audits
Liquidity & Market Making	15%	Programmatic	DEX/LP incentives and stability
Community Airdrops	10%	Campaign-based	Lore drops, community milestones
Team & Contributors	10%	6m cliff + 18m linear	Aligned to delivery
Strategic Partners	7%	3m cliff + 12m linear	Exchanges, infra, distribution
Reserves	3%	Unlocked	Contingency

Allocations are indicative and may be refined before listings. Any updates will be announced publicly.

5. Distribution

- **Launch:** Initial liquidity on PancakeSwap; contract verified on BscScan.
- **Participation rewards:** Emissions for staking, quests, and governance engagement.
- **Airdrops:** Lore-aligned campaigns for early community.
- **Vesting:** Multi-sig timelocks; public vesting dashboards.

6. Utilities

Core access

- NFT gating for lore drops and special mints
- Feature access across official products
- Preferential fees and creator tools

Incentives

- Staking rewards with governance weight
- Quest and referral bounties
- Partner integrations across the ecosystem

7. Governance

ZARU holders govern emissions, treasury usage, product priorities, and partner programs through a staged model.

- **Phase 0:** Council + security controls
- **Phase 1:** Snapshot-style signaling, quorum thresholds
- **Phase 2:** On-chain execution via timelock and multi-sig

Participation-first governance with transparent constraints and clear execution routes.

8. Security and audits

- **Audits:** [Audit Report #3](#) (ZARU core); related: [#1](#), [#2](#)
- **Contract posture:** Verified, minimal privileges, immutable core where feasible
- **Operational security:** Multi-sig treasury; limited admin roles; monitoring
- **Bug bounty:** Public disclosures with tiered rewards

9. Roadmap

Phase	Milestones	Status
Q4 2025 — Launch	Token page, liquidity, first lore drop	Planned
Q1 2026 — Utilities	Staking v1, quest engine, NFT gating	Planned
Q2 2026 — Governance	Snapshot voting, treasury frameworks	Planned
Q3 2026 — Scale	Mobile flows, partner integrations	Planned

Roadmap may adapt to market conditions and community priorities.

10. Compliance and risk

- **Jurisdictional awareness:** Users must comply with their local laws.
- **No investment advice:** This is informational only.

- **Volatility risk:** Crypto assets involve market, technical, and regulatory risks.
- **Transparency:** Verified contracts, audits, and multi-sig controls.

By interacting with ZARU, participants acknowledge blockchain and smart contract risks.
